#### Test Method

In order to show the usefulness of the compound [I] of the invention, the pharmacological test result of the representative compound of the present invention is shown in the following.

#### 35 Test 1: Determination of histone deacetylase inhibitor activity

The partial purification of human histone deacetylase, the

preparation of [ $^3\text{H}$ ] acetyl histones, and the assay for histone deacetylase activity were performed basically according to the method as proposed by Yoshida et al. as follows.

#### Partial purification of human histone deacetylase

5           The human histone deacetylase was partially purified from human T cell leukemia Jurkat cells. Jurkat cells ( $5 \times 10^8$  cells) were suspended in 40 mL of the HDA buffer consisting of 15 mM potassium phosphate, pH 7.5, 5% glycerol and 0.2 mM EDTA. After homogenization, nuclei were collected by centrifugation ( $35,000 \times$   
10 g, 10 min) and homogenized in 20 mL of the same buffer supplemented with 1 M  $(\text{NH}_4)_2\text{SO}_4$ . The viscous homogenate was sonicated and clarified by centrifugation ( $35,000 \times$  g, 10 min), and the deacetylase was precipitated by raising the concentration of  $(\text{NH}_4)_2\text{SO}_4$  to 3.5 M. The precipitated protein was dissolved in  
15 10 mL of the HDA buffer and dialyzed against 4 liters of the same buffer. The dialyzate was then loaded onto a DEAE-cellulose (Whatman DE52) column ( $25 \times 85$  mm) equilibrated with the same buffer and eluted with 300 mL of a linear gradient (0-0.6 M) of NaCl. A single peak of histone deacetylase activity appeared  
20 between 0.3 and 0.4 M NaCl.

#### Preparation of [ $^3\text{H}$ ] acetyl histone

To obtain [ $^3\text{H}$ ] acetyl-labeled histone as the substrate for the histone deacetylase assay,  $1 \times 10^8$  cells of Jurkat in 20 mL of RPMI-1640 medium (supplemented with 10% FBS, penicillin (50  
25 units/mL) and streptomycin (50  $\mu\text{g/mL}$ )) were incubated with 300 MBq [ $^3\text{H}$ ] sodium acetate in the presence of 5 mM sodium butyrate for 30 minutes in 5%  $\text{CO}_2$ -95% air atmosphere at  $37^\circ\text{C}$  in a  $75\text{ cm}^2$  flask, harvested into a centrifuge tube (50 mL), collected by centrifugation at 1000 rpm for 10 minutes, and washed once with  
30 phosphate-buffered saline. The washed cells were suspended in 15 mL of ice-cold lysis buffer (10 mM Tris-HCl, 50 mM sodium bisulfite, 1% Triton X-100, 10 mM  $\text{MgCl}_2$ , 8.6% sucrose, pH 6.5). After Dounce homogenization (30 stroke), the nuclei were collected by centrifugation at 1000 rpm for 10 minutes, washed 3  
35 times with 15 mL of the lysis buffer, and once with 15 mL of ice-cooled washing buffer (10 mM Tris-HCl, 13 mM EDTA, pH 7.4)

successively. The pellet was suspended in 6 mL of ice-cooled water using a mixer, and 68  $\mu$ l of  $H_2SO_4$  was added to the suspension to give a concentration of 0.4 N. After incubation at 4°C for 1 hour, the suspension was centrifuged for 5 minutes at 15, 000 rpm, and the supernatant was taken and mixed with 60 mL of acetone. After overnight incubation at -20°C, the coagulated material was collected by microcentrifugation, air-dried, and stored at -80°C.

#### Assay for histone deacetylase activity

For the standard assay, 10  $\mu$ l of [ $^3H$ ] acetyl-labeled histones were added to 90  $\mu$ l of the enzyme fraction, and the mixture was incubated at 25°C for 30 minutes. The reaction was stopped by addition of 10  $\mu$ l of HCl. The released [ $^3H$ ] acetic acid was extracted with 1 mL of ethyl acetate, and 0.9 mL of the solvent layer was taken into 10 mL of toluene scintillation solution for determination of radioactivity.

#### Test 2: Determination of T-cell growth inhibitor activity

The T lymphocyte blastogenesis test was performed in microtiter plates with each well containing  $1.5 \times 10^5$  splenic cells of Lewis rats in 0.1 mL RPMI-1640 medium supplemented with 10% fetal bovine serum (FBS), 50 mM 2-mercaptoethanol, penicillin (100 units/mL) and streptomycin (100  $\mu$ g/mL), to which Concanavalin A (1  $\mu$ g/mL) was added. The cells were incubated at 37°C in a humidified atmosphere of 5%  $CO_2$  for 72 hours. After the culture period, suppressive activities of the test compounds in T lymphocyte blastogenesis were quantified by AlamarBlue (trademark) Assay. The test samples were dissolved in DMSO and further diluted with RPMI-1640 medium and added to the culture. The activities of the test compounds were expressed as  $IC_{50}$ .

The results of those tests are shown in the Table 1.

5 recrystallized from 50% aqueous EtOH to give Compound E123 (374 mg) as a pale yellow powder.

<sup>1</sup>H-NMR (300 MHz, DMSO-d<sub>6</sub>, δ): 4.33 (2H, s), 6.17 (2H, s), 6.44 (1H, d, J=16 Hz), 7.24-7.32 (2H, m), 7.38-7.48 (3H, m), 7.53-7.62 (4H, m).

10 Example 124

Compound E124 was obtained from Compound (260) according to manners similar to Preparations 337 and 208 and Example 58 (7 mg).

<sup>1</sup>H-NMR (300 MHz, DMSO-d<sub>6</sub>, δ): 3.93 (2H, s), 4.18 (2H, s), 6.45 (1H, d, J=16 Hz), 7.13 (1H, s), 7.23-7.38 (7H, m), 7.43 (1H, d, J=16  
15 Hz), 7.54 (2H, d, J=8 Hz);

MASS (ES+): m/z 334 (M+1).

The compounds obtained in the above-mentioned Preparations are shown in the following Table 2 (including Tables 2-1 to 2-44)

#### INDUSTRIAL APPLICABILITY

As mentioned above, the present invention can provide a novel compound having a potent inhibitory effect on the activity of histone deacetylase, and a pharmaceutical composition comprising the same. The compound is useful as an active ingredient of an immunosuppressant and an antitumor agent, and as an active ingredient of a therapeutic or prophylactic agent for diseases such as inflammatory disorders, diabetes, diabetic complications, homozygous thalassemia, fibrosis, cirrhosis, acute promyelocytic leukaemia (APL), organ transplant rejections, autoimmune diseases, protozoal infections, tumors, etc.

This application is based on the patent applications Nos. 2003900116 and 2003905406, both were filed in Australia, and the contents of which are incorporated hereinto by reference.
